ODE Code Submission Process

1. If there is no Defect or Feature Request work item for the feature or fix yet, open the ODE project area on RTC, right-click on the Work Items folder, click New -> Work Item… and choose a Defect or Feature Request as appropriate. Fill in the fields as your needs dictate.
2. Create a repository workspace that flows to the correct stream (5.0 or 5.1) and load the files into an Eclipse project or your file system. Make changes as necessary, test them, and check-in and deliver when appropriate.
3. If desired and appropriate for the fix/feature, create zips/jars for the new binaries (and/or rules and/or plugin, etc.) and put them in CSNext/RAM in the appropriate section. You may want to upload a README with it so others will know what changes the new file(s) contain.
4. Complete the work item (move status to Resolved, etc.).
5. Smile and bask in the knowledge that you are now an official contributing developer on the ODE open source team!
